is a key sequence to assist the computer keyboard in text entry. A KEYMACRO is created by the KEYMACRO program using any key on the keyboard as the start point. A keyboard shortcut can then be assigned to a keymacro by clicking on the menu item, and typing the key sequence and any modifier keys that are assigned to the keymacro. As such, macros can replace repetitive keystrokes or can save the user time typing, and can even improve keyboarding. Keymacro is also designed to ensure privacy by making the KEYMACRO's one key stroke sequence the only one available for use. Paddy is a text editor for Windows that offers both a simple and powerful interface that makes it easy to create, read, and edit text documents. It is integrated with the Windows operating system and comes packaged with all the tools that you need to create and edit plain text documents, including support for basic character conversion, complex syntax checking, and powerful editing features. Common features Paddy's simple interface makes it easy to use as a basic text editor. We liked its plain style, but some users might find it a little heavy. Although not completely free, there are no licensing requirements and no installation necessary. One thing that we didn't like, however, is that it doesn't support special characters, such as accents, parentheses, symbols, and so on. So we can't use an application like Paddy to edit documents in French, Japanese, or other languages that include these characters. All you need is a PC with an operating system that supports plain text documents. The application's interface is integrated with Windows 7. Paddy runs on Windows 8 and Windows 10 as well as on all Windows 7 editions.
